Disclaimer: The TipRanks Smart Score performance is based on backtested results. Backtested performance is not an indicator of future actual results. The results reflect performance of a strategy not historically offered to investors and does not represent returns that any investor actually attained. Backtested results are calculated by the retroactive application of a model constructed on the basis of historical data and based on assumptions integral to the model which may or may not be testable and are subject to losses. General assumptions include: XYZ firm would have been able to purchase the securities recommended by the model and the markets were sufficiently liquid to permit all trading. Changes in these assumptions may have a material impact on the backtested returns presented. Certain assumptions have been made for modeling purposes and are unlikely to be realized. No representations and warranties are made as to the reasonableness of the assumptions. This information is provided for illustrative purposes only. Backtested performance is developed with the benefit of hindsight and has inherent limitations. Specifically, backtested results do not reflect actual trading or the effect of material economic and market factors on the decision-making process. Since trades have not actually been executed, results may have under- or over-compensated for the impact, if any, of certain market factors, such as lack of liquidity, and may not reflect the impact that certain economic or market factors may have had on the decision-making process. Further, backtesting allows the security selection methodology to be adjusted until past returns are maximized. Actual performance may differ significantly from backtested performance. Backtested results are adjusted to reflect the reinvestment of dividends and other income and, except where otherwise indicated, are presented gross-of fees and do not include the effect of backtested transaction costs, management fees, performance fees or expenses, if applicable. Please note all regulatory considerations regarding the presentation of fees must be taken into account. No cash balance or cash flow is included in the calculation.

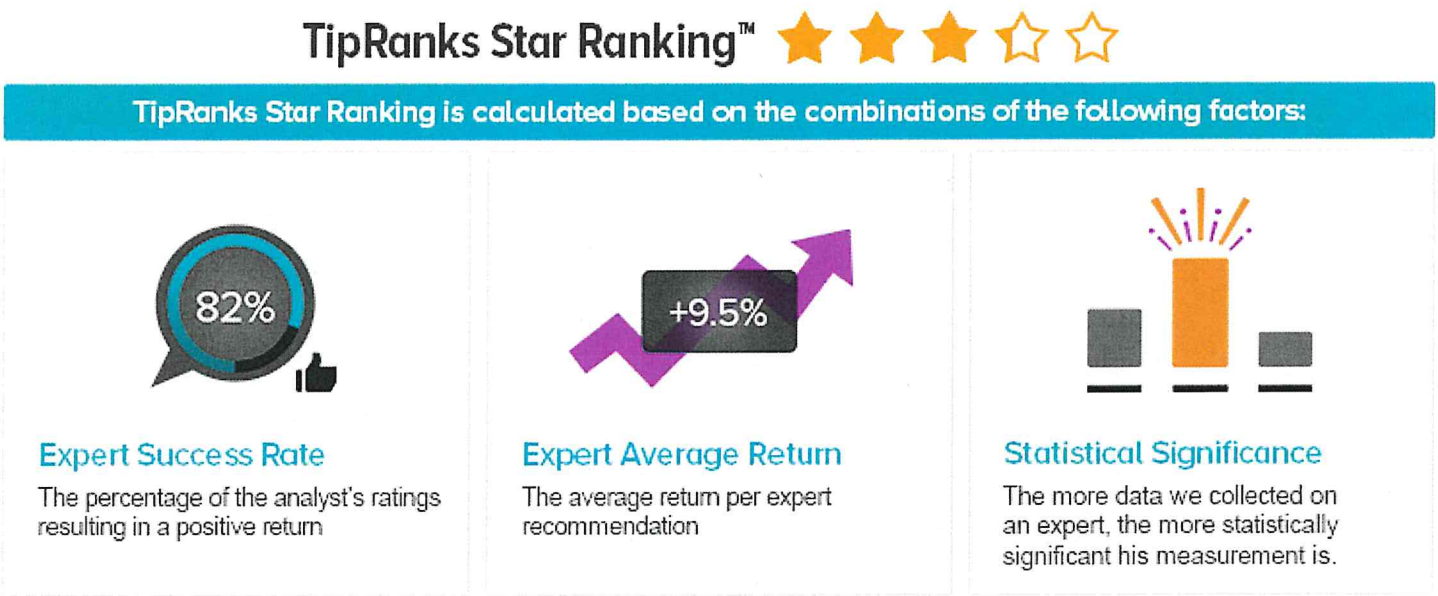
How are experts ranked

Financial Terms > How are experts ranked



TipRanks developed a 3 tier unique proprietary formula to rank financial experts. The three factors taken into account are the experts's success rate, the average return per transaction, and statistical significance.

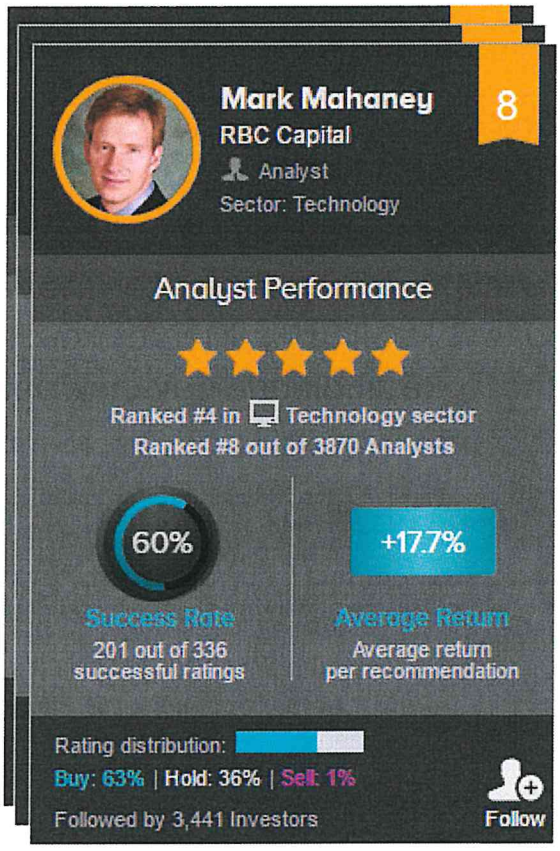
Success Rate: This measure looks at each transaction in a binary form, as it either lost money or earned money. The average is the win-to-loss ratio. We add this to ensure that an expert does not have 10 losing transactions offset by one winning transaction with a high profit - making his or her performance unreasonably high. This measure is often referred to as the hit ratio.

Average Return: The average return of all transactions is the best measure of performance. We don't want to measure single lucky hits but rather the expert's overall performance. Experts in the biotech field will naturally have higher returns on their winning trades, but those will still have to compensate for higher losses on bad recommendations.

have his or her ranking scored higher than an expert with a low recommendation count (with all other things being even). In the same way an expert with 1,000% average return but one recommendation would rank very low, an expert with just 2% average return across hundreds of recommendations would rank very high.

How do I use the star ranking in my decision making?

The expert's star ranking does not pinpoint his or her return or hit ratio, but rather compares him or her to all experts tracked by TipRanks. Reaching a 5-star rating is extremely difficult and guarantees the expert has a **high success rate** accompanied by a **high average return** and **high transaction count**. TipRanks also dedicates a whole section to our top ranked 25 experts, which you can further filter by sector to see who you should trust!



investing tool that allows private investors and day traders to see the measured performance of anyone who provides financial advice.
